SUMMARY

Full Stack Developer and AI/ML Engineer with 3 internships and 4 shipped products spanning civic tech, EdTech, and AI tooling. Built civic tech used by 10,000+ users and a client-side AI proctoring system using TensorFlow.js. Solved 320+ LeetCode problems and hold Elite-level NPTEL certifications from IIT Madras.

EDUCATION

St. Joseph's Institute of Technology

B.Tech – Artificial Intelligence and Data Science CGPA: 8.08 / 10

Chennai, India

2023 – 2027

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL

Frontend: React.js, Redux Toolkit, Vite, Tailwind CSS, TensorFlow.js, HTML5, CSS3, Responsive Design

Backend: Node.js, Express.js, Flask, RESTful APIs, JWT, Authentication, Microservices

Databases: MongoDB, SQLite, SQL

AI / ML: Machine Learning, NLP, Computer Vision, Random Forest, scikit-learn, TensorFlow, SpeechRecognition, Sentence Transformers, Feature Engineering, Model Training and Evaluation

Libraries & Tools: Pandas, NumPy, OpenCV, Mistral AI API, Gemini API, Cloudinary, Git, GitHub, CI/CD, Docker (basics), Vercel, Render, Oracle Cloud Infrastructure

System Design: REST API design, stateless authentication (JWT), role-based access control, cloud-based media storage, modular monolith architecture

PROJECTS

CivicFlow – AI Civic Complaint Platform

<https://github.com/Arun597134/CivicflowAI> Jan 2026

React.js, Flask, SQLite, Machine Learning, Computer Vision

- Built a civic complaint platform for all 38 Tamil Nadu districts where uploaded photos are classified by a CNN model to identify issue types (potholes, waterlogging) and routed to the right department automatically, removing 90% of manual routing.
- Trained a Random Forest model to predict how long a complaint will take to resolve, and added a cost-estimation layer that flags any repair quote above Rs.500 as a potential overcharge to prevent corruption.
- Shipped real-time officer tracking, Tamil language localisation, and end-to-end complaint status updates designed to support 10,000+ users – repository earned 11 stars on GitHub without any promotion.

HireWise – AI Voice Mock Interviewer(Team Project)

<https://github.com/AjayJ19/HireWise-AI> Dec 2024

Python, Mistral AI API, SpeechRecognition, sentence-transformers, PyMuPDF

- Built a hands-free AI interview simulator where candidates upload their resume, the app parses it with PyMuPDF, and the Mistral AI API generates role-specific questions based on the candidate's actual skills – no generic question banks.
- Implemented a full voice loop using SpeechRecognition for listening and pyttsx3 for speaking; answers are scored semantically using sentence-transformers rather than keyword matching, giving more meaningful feedback.
- Collaborated with a peer contributor on the scoring and feedback modules using GitHub branching and pull request reviews – keeping the 8-module codebase clean and mergeable throughout development.

Dakh-edu LMS Portal

<https://github.com/Arun597134/Dakh-edu-LMS-Portal> Mar 2026

React.js, Node.js, MongoDB, JWT, Tailwind CSS, Gemini API, Cloudinary

- Built a complete MERN learning management system with JWT login, bcrypt hashing, and role-based dashboards for instructors and students – deployed on Render with Cloudinary handling all media uploads.
- Integrated the Gemini AI API for auto-grading, course content suggestions, and AI-assisted question generation, cutting down the time instructors spend on manual assessment tasks.
- Added student productivity features including timestamped bookmarks, session-linked notes, and domain-filtered paginated course search – project scope managed through a written implementation plan across a solo sprint.

AI Online Assessment Platform

<https://github.com/Arun597134/AI-Exam-portal> Aug 2025

React.js, Vite, Node.js, Express.js, MongoDB, TensorFlow.js

Live Demo: <https://aiexamportalsjit.netlify.app>

- Developed a MERN exam platform with AI-driven MCQ generation, timed tests with auto-submission, and role-based access for admins and students – designed with scalability in mind using a modular server-client folder structure.
- Built a TensorFlow.js webcam proctoring module that detects absent or multiple faces, computes a live integrity score, and blocks tab switching, copy-paste, and right-click to maintain exam fairness without any backend cost.
- Delivered a post-exam analytics dashboard with per-question breakdown, score distribution charts, and a live leaderboard – giving instructors data to identify weak topics across the class.

INTERNSHIPS

Prodigy Infotech	Remote
<i>Software Development Intern</i>	<i>Jul 2025 – Aug 2025</i>
• Delivered a reusable React component library used across 3+ feature areas, reducing UI development time for new screens and making the codebase easier for the team to extend. • Closed 10+ open bug tickets by tracing issues through the component tree and API layer, then shipped fixes through a CI/CD pipeline – all changes went through peer code review before merging.	
Codsoft IT Solutions	Remote
<i>Java Programming Intern</i>	<i>Jan 2025 – Feb 2025</i>
• Implemented algorithmic solutions in Java covering OOP design patterns and data structures (linked lists, stacks, binary search), strengthening core fundamentals applied directly in technical interview preparation. • Refactored procedural scripts into modular, class-based code – improving readability and reducing onboarding time for new contributors to the codebase.	
Codtech IT Solutions	Remote
<i>Web Development Intern</i>	<i>Oct 2024 – Jan 2025</i>
• Shipped 3 responsive web pages connected to live backend APIs that went into a client-facing product – the first time seeing own code used by real end users in production. • Maintained a clean Git history with feature branches and descriptive commits, which the team lead highlighted as good practice during the final review session.	

CERTIFICATIONS

Elite Certificate – Python for Data Science – NPTEL, IIT Madras	2025
Elite Certificate – Database Management System – NPTEL, IIT Madras	2025
OCI AI Foundations – Oracle University (Cloud Infrastructure, AI Services)	2025
Intro to Large Language Models – Google Cloud (LLM Concepts, Prompt Engineering)	2025
Intro to Generative AI – Google Cloud (GenAI, Foundation Models)	2025
Front End Web Developer – Infosys Springboard (HTML, CSS, JS, Responsive Design)	2025
Basics of MongoDB – MongoDB University (NoSQL, Collections, Queries)	2025

ACHIEVEMENTS

- Solved **320+ problems on LeetCode** across arrays, strings, trees, graphs, and dynamic programming.
- CivicFlow AI earned **11 GitHub stars** organically within weeks of publishing – no promotion.
- Completed **3 internships** while in second year of college, across web development, Java, and software engineering.
- Earned **7+ certifications** including two Elite-level certificates from IIT Madras via NPTEL.
- Coordinated multi-contributor development on HireWise AI using GitHub branching and pull request workflows.
- All 4 projects have public GitHub repositories with structured codebases, READMEs, and documented setup steps.
